

TVII (Thompson Valve II)

Bolt-on cap provides easy access to piston and seal

Anti-vibration disc standard to prevent knob from moving during transit

Triple plunger seals prevent media from entering piston chamber and extend valve life

Seat placed in body allows for easy removal during servicing-

> Modular components align accurately to ensure proper assembly

Breather vents located under the knob prevent dust from entering piston chamber

> Spring design provides long life

O-ring on sleeve prevents dust migration

Clean-out port placed directly under inlet to provide easy removal of dirt or debris

Alternative sleeves available for particular abrasives and applications

The TVII is a normally closed, self sealing, abrasive metering valve with instant, smooth response to either pneumatic or electric deadman controls. This fail-safe valve shuts off abrasive flow to the nozzle and seals the tank at the same instant. The clean-out feature provides a quick and easy way to clear an obstruction from the metering sleeve. The TVII is ideal for multiple outlet units and is easily adaptable to most existing blasting systems.

The TVII is designed to offer the highest level of performance and long life.
