SRC
BLAST & RECOVERY SYSTEM

-1 Cubic Foot storage hopper for all abrasive types.
 Foot valve blast control.

-Abrasive reclaiming system with airwash and screening for efficient processing of abrasive for re-use.

-Large window for viewing, heavy duty gloves for comfortable blasting.

-Reverse pulse cartridge dust collector and high static blower.

-Regulator and air filter.

-Sealed, gasketed access and inspection doors make the system clean and environmentally friendly.

- 115V / single phase power requirement, no transformers needed.

- 3/16" or 1/4" tungsten carbide blast nozzle, separate blow off air.

-Options.

- Workcar with track extension for easy loading.**
- Stationary or workcar mounted turntable.**
- Vertical sliding door for tight floor plans and using work cars..**
- Tumble basket attachment for small parts batching.**
- Rubber lined cabinet and reclaimers for coarse abrasives.**
- Aerated feed valves for fine abrasives.**
- Automatic pulse for dust collector.**
- Special electric requirements, i.e. 3 phase.**
- HEPA Filter**

Tumble basket attachment is used for blasting small parts in a batch process. Adjustable timer and nozzle holder included.

Aerated feed valves are used for extremely fine abrasives, where flowability is important.

Work car and track extension make cabinet loading and unloading easy and safe.

HEPA filter on discharge adds peace of mind when using special materials.
