

IBIX Apollo 1 Fusion

The Apollo 1 Twin Tank Technology revolutionizes aero-abrasive deep cleaning by mixing aggregates with disinfectant in a controlled operating process to eliminate soiling in order to mitigate viral surface contamination.

Remove even biofilms embedded in semi-porous surfaces with Apollo's non-destructive abrasion technology. Follow immediately with a liquid disinfectant from our nebulizing tank.

*IBIX abrasive blasters are specified by ICP Group for use with EPA compliant Benefact Decon30, ShockWave RTU or Concentrate for Microbial Mitigation/Reduction of viruses and bacteria.**
